Databases	: NoSQL, Oracle 8i/9i, DB2.
Operating Systems	: Windows XP/Vista, UNIX, LINUX, Mac OS X.
Version Control Tool	: SVN, GIT

PROFESSIONAL EXPERIENCE

CVS, Northbrook, IL   **June 2018 – Present**
Senior Software Engineer
Employer: Cognizant Technology Solutions
Project: Caremark Nursing System

CVS Caremark nursing application is an online internal application. This application is mainly developed to help health care providers with information regarding invoicing, payers, agencies, nursing requests and visits. Providing input into designs and technology solutions to facilitate decision making, and mitigate development and implementation risks.

Responsibilities:

- Involved in all the phases of SDLC including Requirements Gathering, Design & Analysis of the Customer Specifications, Development and Customization of the Application.
- Analyze system and functional requirements to determine feasibility and scalability of application.
- Developer SPA using components, modules, observables and routers.
- Migrating the application using React and Redux. Have good knowledge and understanding of React & Redux frameworks.
- Developed user interfaces using JavaScript, HTML5, and CSS3 and using CSS preprocessors such as SASS, LESS.
- Used Model View Controller framework such as Angular JS framework for creating Single Page Application.
- Utilized GitLab to perform code reviews on pull requests and Usage of Jenkins for CI/CD pipeline.

CareFirst BCBS, Owings Mills, MD   **Nov 2016 – May 2018**
Senior Software Engineer
Employer: Cognizant Technology Solutions
Project: MOS (Member Online Services)

Member Portal is an online application developed by CareFirst to provide online services to their members such as claims search, plan year summary and itemized details, Deductible status, Changes PCP, Coordination of benefits, Eligibility details, Explanations of Benefits, Request ID card and Print ID card. Also worked in different modules like Employer and Broker Portals.

Responsibilities:

- Implementing the Design and developing modules using Agile Methodology.

- Lead front end integration projects & developed user interfaces standard layout and templates using JavaScript, HTML5 and CSS3.
- Developed modals, autocomplete for form in Angular JS and used Angular http services.
- Developed the Application as SPA using **AngularJS**, Dependency Injection, Custom Directives, Angular UI Router and Angular UI Bootstrap frameworks.
- Used Angular Directives to extend syntax definitions for HTML5. Created client side validation using JavaScript and Regular Expressions.
- Written Test Cases using Jasmine & karma for Angular JS.
- Used ALM for bug tracking and fixed the bugs. Used SVN for version controls.

eBay, Bellevue, WA   **Jan 2016 – Oct 2016**
Web Developer
Employer: Icore Infotech Inc
Project: GSP (Global Shipping Program)

The Global Shipping Program is E-commerce web-based application and it is part of eBay, which simplifies selling an item to an international buyer. All eligible listings for sellers who qualify are automatically included in global shipping program. This Program helps seller to ship their items globally in easy way. Overall a completely flexible and scalable application which can incorporate any modifications in any phase.

Responsibilities:
- Created client-side validations and developed user interfaces standard layout and templates using **HTML**, JavaScript, HTML5 and CSS3.
- Implemented the Design and developing modules based on water fall modal.
- Developed frontend application and reusable UI components – web and mobile applications.
- Created custom, general use modules and components which extend elements and modules of core angular JS.

Apple, Sunnyvale, CA   **Jul 2015 – Dec 2015**
Software Developer
Employer: Icore Infotech Inc
Project: Access Manager

Access Manager is web-based application contains two different functionalities. The primary functionality is basic UI and provisioning part, secondarily – directory services provisioning is a one-stop solution for all provisioning activities at apple. Apple's business requires providing access to its users and vendors to various enterprise level applications with certain level of privileges for the user. DS Provisioning uses the access manager application for provisioning various internal systems in Apple.

Responsibilities:
- Good knowledge in building and deploying maven scripts for deployment and customization. WAR/JAR file management for web applications with the help of CI tool devops.
- Developed the application as SPA using angular JS, angular router and angular UI bootstrap frameworks
- Interacted with client to get the design and mockups.
- Good experience using Bootstrap for responsive Web Design and CSS media queries.

TechnoLabs Software Solution, Hyderabad, INDIA   **Jul 2012 – Jul 2013**
Programmer Analyst - Project: TechnoLabs

Responsibilities:
- Developed web pages and components using HTML, CSS & JS.
- Analyzing requirements and involved low level design of project.
- Participated in maintenance and production support.
